
SOLUTIONS FOR HIGHER EDUCATION · Employability, AI & Innovation

24 July 2026

Dear Institutional Leadership / Placement & Innovation Cell,

Subject: Bridging Education, Employability and Innovation at Your Institution

A degree opens doors — but capability is what creates careers. Today's graduates need more than academic qualifications: they need working familiarity with AI and emerging technologies, leadership, communication, entrepreneurship and the realities of a rapidly changing workplace.

Change Management Enterprise (CME) works with higher education institutions to close exactly this gap — between Education, Capability, Employability and Innovation. Our programs span Future Employability, AI & Emerging Technologies, Quantum Technologies, Leadership & Change, Innovation & Entrepreneurship, and Research & Technology Orientation, designed for students, faculty, researchers, placement teams and innovation cells alike.

We would welcome the opportunity to design a program tailored to your institution's goals, whether that is strengthening placement outcomes, building an innovation culture, or introducing your students and faculty to AI and quantum technologies.

- Improve student employability
- Build future skills at scale
- Create AI and emerging technology awareness
- Strengthen innovation and entrepreneurship
- Develop leadership capabilities
- Create industry-relevant learning experiences

We would be glad to present a short institutional demonstration and explore an engagement model designed specifically for your students and faculty. To discuss this further, please reach Santosh Talaghatti directly at +91 70304 41000 or ceo@changemanagemententerprise.com.

Warm regards,

Santosh Talaghatti
